<sup>a</sup> Based on all OECD countries with available data.

NOTES:	<sup>b</sup> Graduation rate was in 2011. To generate estimates that are comparable across countries, OECD calculated high school graduation rates by dividing the number of first-time graduates (of any age) completing upper secondary education programs in the country by the population of the typical graduation age, which OECD refers to the age of the students at the beginning of the school year (e.g., 17 years old in the United States). Countries are ordered by 2010 high school graduation rate. Tied countries/jurisdictions are listed alphabetically.
